

ACTIVATION IN PENTESTER PORTAL:

1. Go to Clients
2. Select the client and click on *Client Portal* tab
3. *Request Pentest* setting is enabled by default when creating a new client. When disabled, the client will not be able to request a new project or request a retest:

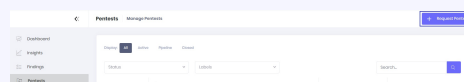

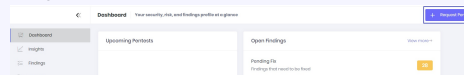

4. To allow client users to request a new project or request a retest, it is needed to enable the toggle and to [select a Client Request Form](#):

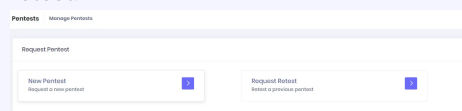

If you do not select a Client Request Form, the client can still request a retest for a project, but cannot request a new project.

CLIENT PORTAL:

1. After allowing client users to request a retest for a project or to request a new project, the [Request Pentest](#) button is displayed in the Dashboard and in the Projects:

2. When the client user clicks on the [Request Pentest](#) button, he can choose to request a new pentest or to request a retest:

2.1 New Pentest

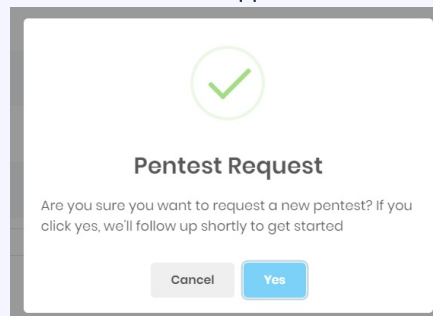

If there are no request forms configured, the client user can not request a new project. If you have selected at least one Client Request Form in the Pentester portal, the client user can create a new project based on the form selected.

2.2 Request Retest

When the client user requests a retest, first he chooses a previous project to retest displayed on a list:

3. By clicking on Next, the client user can edit the Project name, selects or creates a new asset and confirms all information. Submitting the request needs one more time the user client approval:

4. A new Project with status **Requested** is successfully created.

5. Both client users and pentesters can check *the requested project to be retested* in the Dashboard and in the Projects. Users notifications apply as usual.
