

With webhooks you can listen to certain platform events to create advanced integrations with external apps.

WEBHOOKS EVENTS

- Finding Available - when a finding becomes available to client users
- Finding Created - when a finding is created
- Finding Status Changed - when a finding transitions to a new status
- Project Created - when a new project is created
- Project Requested - when a project is requested in the client portal
- Project Status Changed - when the project workflow transitions to a new status
- Project Report Published - when the report is published

WEBHOOK CONFIGURATION

You can configure Webhooks in **Administration / Integrations / Webhooks** (only available to certain Plans and Addons).

The screenshot shows a modal window titled "Add New Webhook Subscription". It contains the following fields and controls:

- Webhook Endpoint:** A text input field with the value "http://myendpoint.com".
- Webhook Events:** A dropdown menu with the selected option "x AppFindingAvailableWebhook".
- Additional Webhook Headers:** A section with a table for "Header Key" and "Header Value", and an "Add" button.
- Buttons:** "Cancel" and "Save" buttons at the bottom right.

Webhook Endpoint: The endpoint on your side where the Cyver platform will send the webhook request

Webhook Events: Select the events you want to trigger requests

Additional Headers: Include any header key/value to include in the request HTTP header

WEBHOOK LOGS

Once the Configurations are created, you can see the activity in the details page, card Webhook Send Attempts.
