

Project fields allow you to add data to your project and pentest templates. Cyver Core offers numerous integrated fields for our Pentest Templates. For example, you can set basic fields like Project Title, Project Status, Default Team, labels, etc.

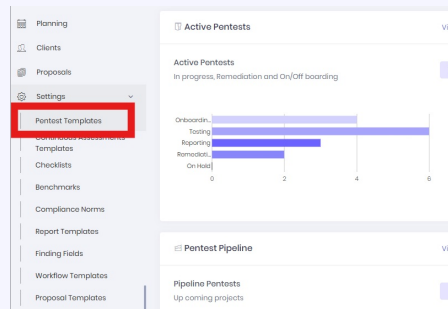

These fields allow you to sort pentests and projects in the template view, in the pentest view, and when running pentests.

With **Custom Project Fields**, you can add your own fields to categorize, sort, and filter pentests, as templates and when running pentests.

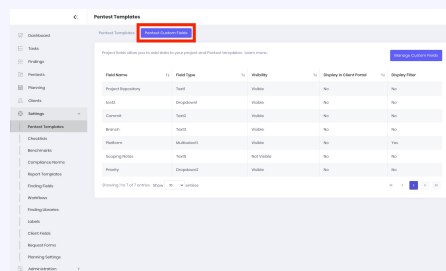

Let's get started!

CREATE CUSTOM PROJECT FIELDS

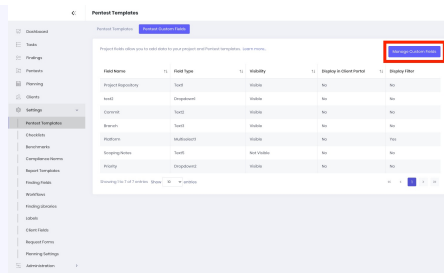

1. From **Settings**, go to **Pentest Templates**.

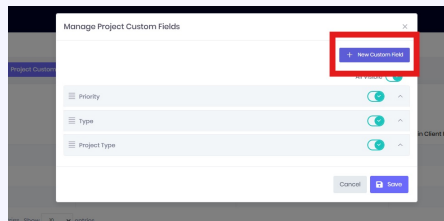

2. Click **Pentest Custom Fields**.

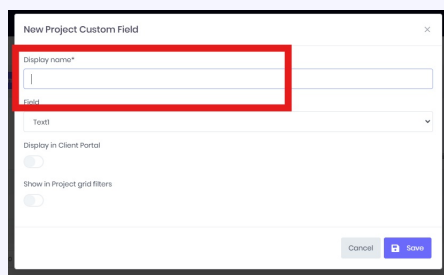

3. Select **Manage Custom Fields**.

4. Click + New Custom Field.

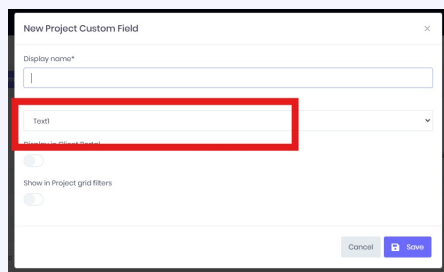

5. Set a **Display Name**. This should be short and easy to display in a column view. This is how your Custom Field will look across the platform.

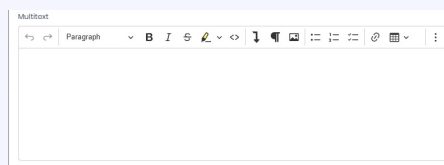

6. Select a **field type**. Cyver Core currently offers 4 types of Custom Project Fields. You may add up to 5 of each Custom Project Field Type.

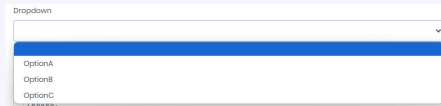

- Text Field (Ideal for short text fields)

- Multitext (ideal for larger and formatted text fields)

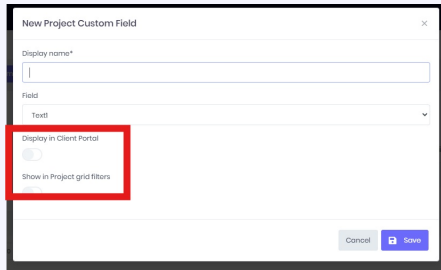

- Dropdown (Select one of a pre-defined selection of choices)

A screenshot of a dropdown menu. The menu is open, showing a list of three options: OptionA, OptionB, and OptionC. The menu has a blue header bar and a white body with a scroll bar.

- Multiselect (Select one or more of a pre-defined selection of choices)

A screenshot of a multiselect form. It has a title "MultiSelect" and three options: OptionA, OptionB, and OptionC. Each option is preceded by an unchecked checkbox.

7. Choose if this Field should show up in the **Client Portal** and be visible to Clients.

A screenshot of the "New Project Custom Field" dialog box. It has a title bar with a close button. Below the title bar is a "Display name*" text input field. Below that is a "Field" dropdown menu with "Text" selected. Below the dropdown is a "Display in Client Portal" toggle switch, which is highlighted with a red box. Below the toggle is a "Show in Project grid filters" checkbox. At the bottom right are "Cancel" and "Save" buttons.

8. Select if your new custom field should show up in **Project Grid Filters**. You can always change this later.

9. Click **Save**.

That's it! You've created a new Custom Project Field!

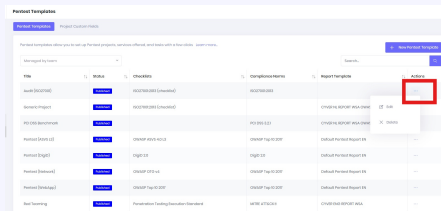

TROUBLESHOOT:

Is your Project Custom Field not showing up? Check visibility settings? You can set all custom fields to be visible with the Master Toggle on the Manage Project Custom Fields tab. Don't forget to hit save!

A screenshot of the "Manage Project Custom Fields" dialog box. It has a title bar with a close button. Below the title bar is a "New Custom Field" button. Below that is a table with three rows: Priority, Type, and Project Type. Each row has a toggle switch and an up/down arrow. The "All Visible" toggle is highlighted with a red box. At the bottom right are "Cancel" and "Save" buttons.

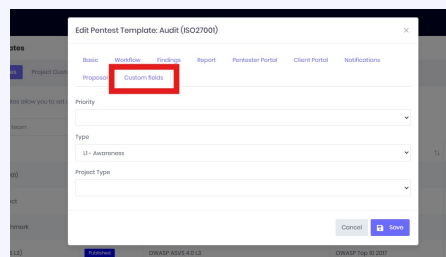

ADDING CUSTOM PROJECT FIELDS TO PENTEST TEMPLATES

1. From the **Pentest Template** menu, select the Pentest Template you want to **edit**.

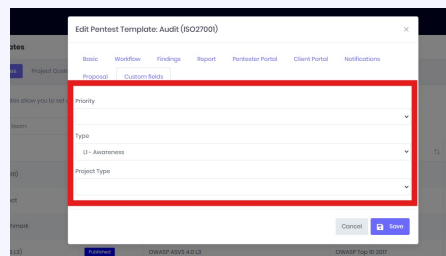

2. Select the ... menu and click **Edit** or Click through to the **Pentest Template** and click **Edit** from **Actions**

3. Click **Custom Fields**.

4. Select the Custom Fields you'd like to see on the Pentest Template.

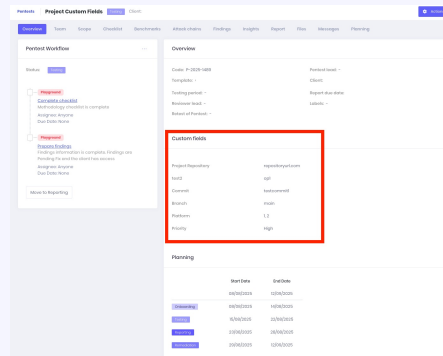

5. Click **Save**.

6. Your Custom Field will be present in any new Pentest you start with this Pentest Template.

CUSTOM PROJECT FIELDS IN THE PROJECT VIEW

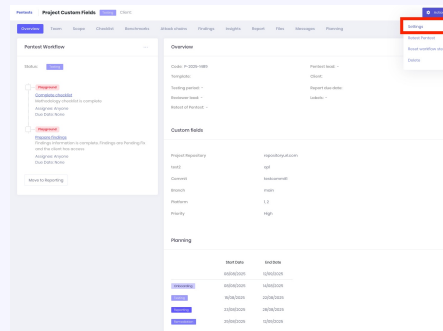

When you use Custom Project Fields, they will be shown in the project's **Overview** tab.

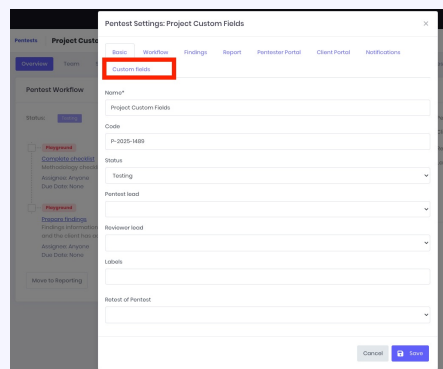

EDIT CUSTOM PROJECT FIELDS IN THE PROJECT

You can edit Custom Project Fields in the Pentest Settings.

1. Go to **Settings**.

2. Move to **Custom fields**.

3. Edit the values for the Custom Fields that you want and click **Save**.

USE PROJECT CUSTOM FIELD REPORT TOKEN

You can use **Project Custom Field** report token in your Report Templates. This will show the value of your Custom Field in the report.

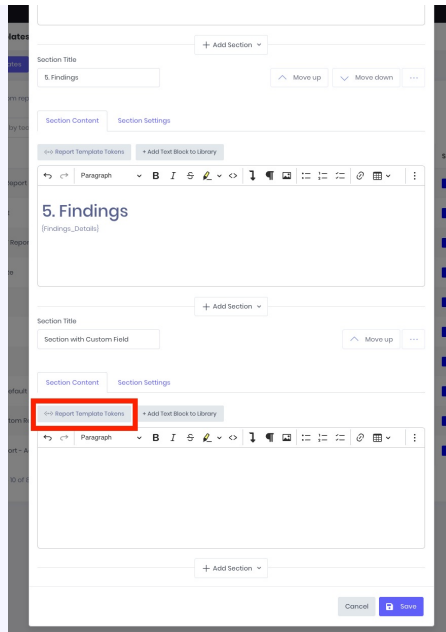

1. From **Settings**, go to **Report Templates**.

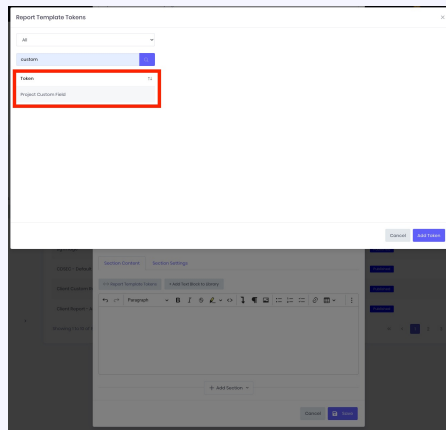

2. Click 3 dots under Actions for the relevant Report Template.

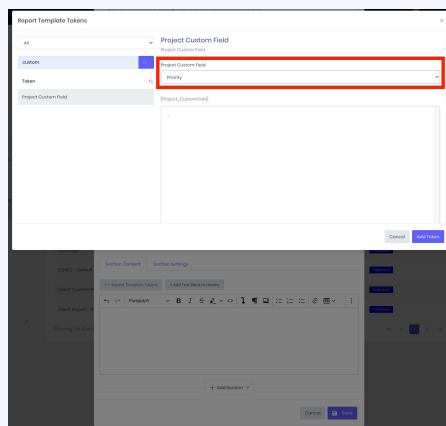

3. Click **Report Template Tokens** in the section that you want to use your Custom Field.

4. Search for **Project Custom Field**.

5. From the drop-down menu, select the Custom Field you want to use, and click **Add Token**.

6. Example usage in the report section:

7. It will be replaced by the value that is set in the Pentest Settings > Custom fields.

That's it! If you need any more help setting up or using Custom Project Fields for your pentest templates, reach out and we'll be happy to help!
