

Cyver Core delivers a complete pentest management platform. That means onboarding takes some time to get everything where you need it. However, once you've invested that time, you'll have everything in place to save time across pentest projects, reporting, and client management.

Need help? Contact your customer success manager with additional questions!

At this step, we're assuming you've had a [product demo](#) and have completed your [15-day free trial of the platform](#). At this stage, you've seen how the platform works and just need some help finalizing your setup to make sure you haven't missed any steps.

BRAND THE CYVER CORE INTERFACE

Cyver Core is fully white-label. You can brand it with your colors, logos, headers, footers, and more.

1. [Customize your interface](#)
2. [Request a custom domain where needed](#)

ONBOARD YOUR TEAM

Once your account has the look and feel you want, you can start onboarding your team:

1. [Create teams](#)
2. [Determine roles and permissions](#)
3. [Add users](#)
4. [Set MFA requirements](#)

You can [add new users at any time](#).

BUILD YOUR PENTEST REPORT TEMPLATES

Pentest report templates allow you to generate reports with data from your pentests auto-populated into placeholders. Cyver uses a mix of Tokens to auto-populate data, content libraries, GenAI to generate new content, and, of course, a complete editor for adding custom content.

If you need help moving your existing report to Cyver Core, contact your Customer Success Manager.

1. [Set up your report template](#)
2. [Set custom language](#)

SET UP WORKFLOWS

Your workflows allow you to manage work, share pentest progress, and track workloads across your teams. You can use the out-of-the-box workflows or build your own.

1. [Set up your custom workflow\(s\)](#)

SET UP COMPLIANCE NORMS & CHECKLISTS

1. [Set up compliance norms](#)
2. [Customize checklists and tasks](#)

SET UP PENTEST PROJECT TEMPLATES

Pentest project templates link everything from your projects including compliance norms, teams, clients, and report templates. The report template pulls everything from the Pentest Project, so it's important that you take the time to set up projects before you get started.

1. [Set up a pentest project template](#)

IMPORT YOUR VULNERABILITY LIBRARY

Setting up your vulnerability library means that your descriptions, remediation tips, ratings, and other data are already in the portal. That means you can automatically merge that data with imports when you start running pentests!

1. [Create a findings library](#)
2. [Import your findings library to the platform](#)
3. [Check auto-merge settings on your project](#)

ONBOARD CLIENTS

1. [Add clients](#)
2. [Customize client portal settings](#)
3. [Share the client portal guide with your clients](#)

START A PENTEST

Everything is in place, all you have to do is start your first pentest!

1. [Set up a pentest](#)
2. [Import Findings](#)
3. [Publish findings to the client](#)
4. [Publish the report to the client](#)
5. Get started!

NEXT STEPS:

You can always do more with Cyver Core! With Add-ons, you can add quotes, invoicing, continuous assessments, and much more to your platform functionality.

1. [Build continuous project templates](#)
2. [Send a quote to the client](#)

That's it! Of course, there are dozens of ways you can further customize every part of your Cyver Core platform – including custom fields, workflows, and checklists, and more.
