

Images come into play across your pentest reports, findings, evidence, and projects. With Image Captions, you can add image descriptions to use across your project - allowing you to build faster reports and descriptions because images already include the information they need.

Images can be added:

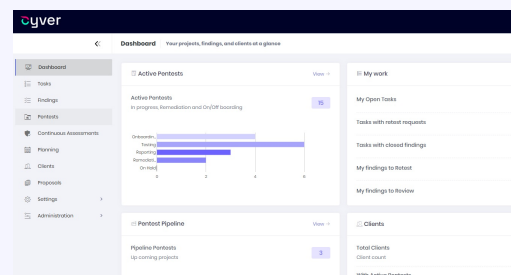

- When you upload findings
- As evidence
- In reports
- In files

HOW TO ADD IMAGE CAPTIONS

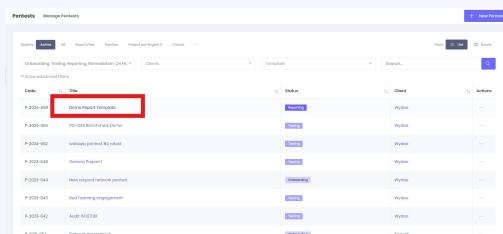

You can add image captions from the image gallery:

PENTEST PROJECTS

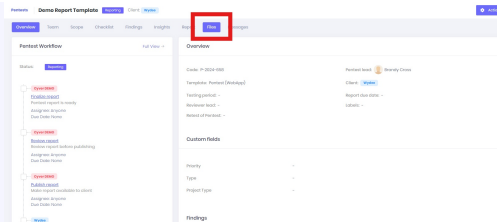

1. Navigate to **Pentests** from the menu

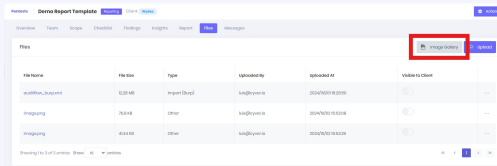

2. Select the project you'd like to add an image caption to

3. Select **Files** from the Pentest menu

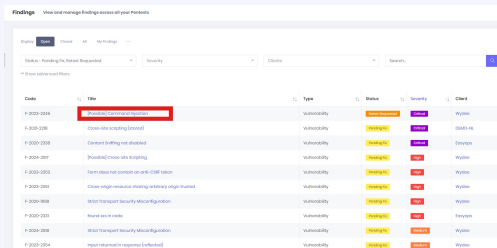

4. Click **Image Gallery** from the Files dashboard

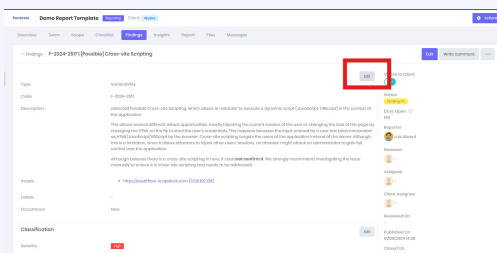

FINDINGS

You can also add images from any finding. To do so, start from the Findings menu or from the pentest project, on the findings submenu.

1. Select the finding you'd like to edit

2. Click **Edit**

3. From the Description Section, use the **Image icon** to access the Image Gallery

Description

[PRODUCT] detected Possible Cross-site Scripting, which allows an attacker to execute any JavaScript (JavaScript, VBScript) in the context of the application.

This allows several different attack opportunities, mostly hijacking the current session of the user or changing the look of the page by changing the HTML on the fly to steal the user's credentials. This happens because the input entered by a user has been interpreted as HTML/JavaScript/VBScript by the browser. Cross-site scripting targets the users of the application instead of the server. Although this is a limitation, since it allows attackers to hijack other users' sessions, an attacker might attack an administrator to gain full control over the application.

Although [PRODUCT] believes there is a cross-site scripting in here, it could **not confirm it**. We strongly recommend investigating the issue manually to ensure it is cross-site scripting and needs to be addressed.

ADD IMAGE CAPTIONS

From the Image Gallery:

1. Click ... next to the image you'd like to edit and select **Set Image Caption**

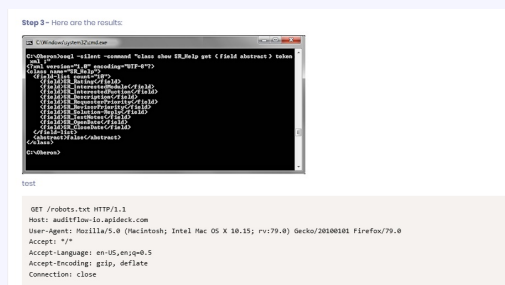

2. Type your image caption

3. Click **Save**

The image caption will show up across all instances of the image in the project. If your image is already included in reports, you should re-generate them to show image captions.

Your image will show up like this in the report:

Images are unique per project. This means your image gallery will only be available on that project, ensuring you don't accidentally share confidential information outside of that project. Therefore, if you're reusing images across projects, you'll have to re-upload them for each project.
