

If you have finding reoccurrences, similar findings clients or projects, or otherwise have to duplicate a finding, Clone Findings allows you to copy data from an existing finding with the click of a button. In addition, clone settings mean you can keep or reset any data you want, making it easy to re-use findings across assets, projects, and even clients.

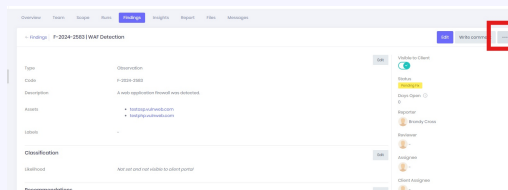

Let's take a look!

HOW TO CLONE A FINDING

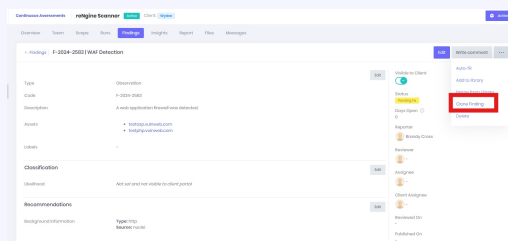

1. Click on the relevant finding from either the Finding menu or the Pentest project

2. Click ... in the Finding menu

3. Select **Clone Finding**

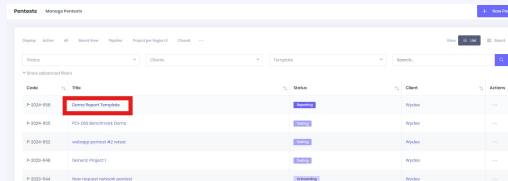

You can either clone your finding to the same project or to a different project.

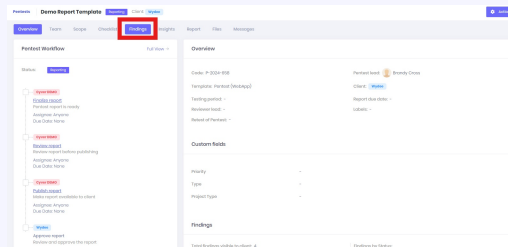

HOW TO BATCH CLONE FINDINGS

You can clone multiple findings at once, including all findings from a single project. To do so:

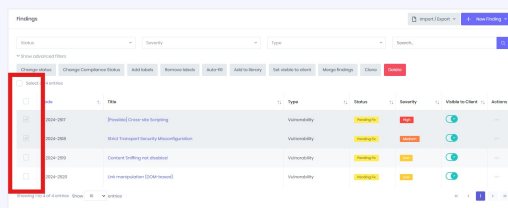

1. Navigate to the relevant pentest project

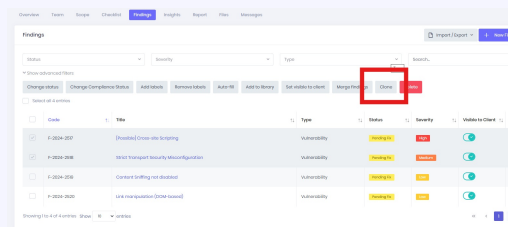

2. Go to **Findings** in the project menu

3. Select the findings you'd like to clone

4. Click **Clone**

CLONE FINDING SETTINGS

You can clone any part of your finding to either the same project or to a new project. These settings also carry through when batch cloning findings.

Clone Finding

Clone this finding to the same project or to a different one.

Client: Wydoe

Options

Select Pentest

P-2024-658 - Demo Report Template (Reporting)

Include following data:

- ☒ Assets
- ☒ Activity
- ☒ Compliance Norms Controls

All other data is included.

Code:

- ☒ Generate new finding codes
- ☐ Keep current finding codes

Status:

- ☒ Keep current status
- ☐ Change status to draft

Cancel Clone

1. Clone to a **project** (Select from active projects, including current active project)

2. Select which data you'd like to keep:

- **Keep Linked Assets** when the test is on the same Assets
- **Keep Activity from the ticket** when this is a reoccurrence or the circumstances and team are the same
- **Keep compliance norms and controls linked to the finding** when the test methodology and norms are the same
- **Generate new findings codes** when you want a Finding you can search separately, for a different project or client.

3. Either immediately publish the finding or set it to draft

4. Click **Clone**

5. Confirm your selection

6. If you've opted not to keep any data such as assets, you can add it to the finding as you normally would by [editing the finding](#).
