

Cyver Core uses Workflows to help you track work across projects, share project updates and status transparently with clients, and estimate workloads and schedules across your team.

Workflows start with **Workflow Templates**, where you define a list of **Tasks**, link them to **Project Status**, and assign tasks to Pentester or Client Users and Teams. When a Task is completed, the **Workflow** automatically moves forward, notifies anyone assigned to the next **Task**, and updates the project **Status**.

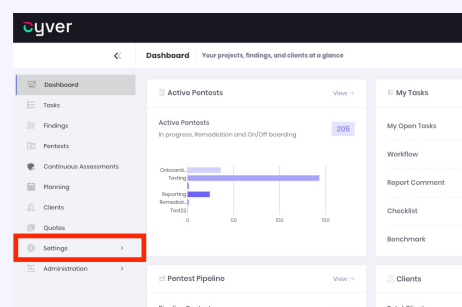

To get started, you can either use one of the default Workflow templates that come with your Cyver Core portal or set up your own.

SETTING UP A NEW WORKFLOW TEMPLATE

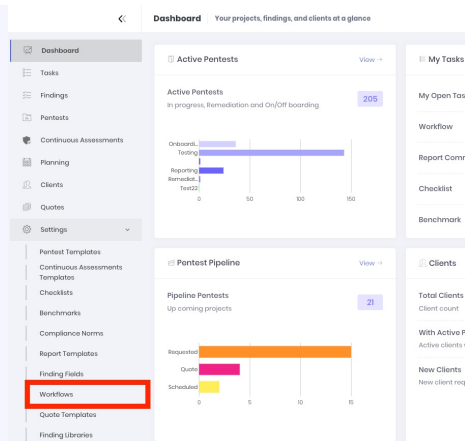

Your Workflow Template is the basis of setting up a new Workflow. When you create a [Pentest Template](#), you'll add your Workflow Template and that will automatically generate the Workflow for all new projects created with that template.

To get started:

1. Click **Settings** from the Cyver Core Menu.

2. Go to **Workflows**.

3. Click + New Workflow Template.

Workflows

Template Status

Define the workflow to engage with clients and Pentesters. Learn more.

Managed by team

Title	Description	Status	Actions
WF Basic	Only workflow steps, no tasks are assigned to pentester or client	Published	...
WF Client report sharing	Simple Pentest-on-a-Service workflow. Client reviews findings, accesses and approves the report	Published	...
WF Full client collaboration	Collaborate with client on a full Pentest-on-a-Service workflow. Client requests pentests, submits assets and communicates via the portal	Published	...
WF Internal team	To be used by pentest teams who don't give client access, but use an internal process	Published	...
Test Workflow	To be used by pentest teams who don't give client access, but use an internal process	Published	...

6. Select which Team manages the Template.

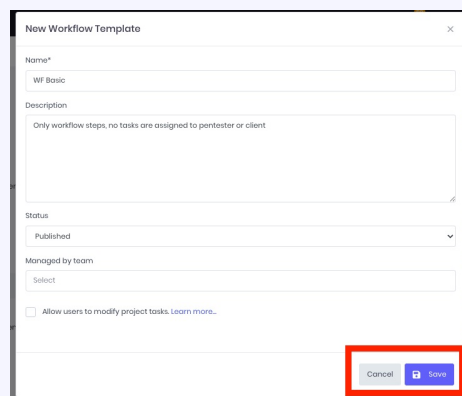

The screenshot shows the 'New Workflow Template' form. The 'Name*' field contains 'WF Basic'. The 'Description' field contains 'Only workflow steps, no tasks are assigned to pentester or client'. The 'Status' dropdown is set to 'Published'. The 'Managed by team' dropdown is highlighted with a red box and shows 'Select'. Below it, the checkbox 'Allow users to modify project tasks. Learn more...' is unchecked. At the bottom right are 'Cancel' and 'Save' buttons.

6. Enable "Allow users to modify project tasks" to allow adding or editing Workflow tasks [directly from the Project view later](#).

The screenshot shows the 'New Workflow Template' form. The 'Name*' field contains 'WF Basic'. The 'Description' field contains 'Only workflow steps, no tasks are assigned to pentester or client'. The 'Status' dropdown is set to 'Published'. The 'Managed by team' dropdown shows 'Select'. The checkbox 'Allow users to modify project tasks. Learn more...' is highlighted with a red box and is now checked. At the bottom right are 'Cancel' and 'Save' buttons.

7. Click **Save**.

The screenshot shows the 'New Workflow Template' form. The 'Name*' field contains 'WF Basic'. The 'Description' field contains 'Only workflow steps, no tasks are assigned to pentester or client'. The 'Save' button is highlighted with a red box. At the bottom right are 'Cancel' and 'Save' buttons.

You'll add tasks to your **Workflow** in the next step.

ADDING OR EDITING TASKS ON AN EXISTING WORKFLOW TEMPLATE

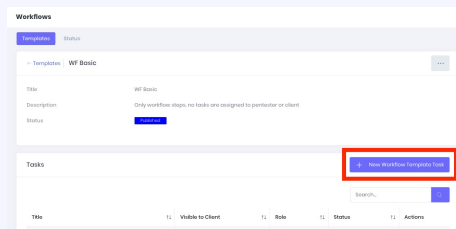

Once you have a Workflow template, you

can start creating Tasks.

1. Open the Workflow you'd like to edit

2. Click + New Workflow Template Task.

3. Set Workflow Details.

- Task Name
- Task Description
- Role (Client, Pentester)
- Link a Status (Requested, Proposal, Scheduled, Onboarding, Testing, Reporting, Remediation, Completed, Cancelled, On Hold)
- Set Task Priority if you have more than one task linked to the same

Status.

- Set a Default Task Completed Notification
- Set Next Step after Task Completion. You can either Navigate to a Next Destination or Show a Popup with a completion message if the next Task is for another Team or User. You can automatically navigate to up to 10 different areas of the portal after completing a task.
- Set whether this task is visible to the Client or not. This means it will be visible in the Client Portal as a next step of the project. Clients will see it in the workflow and will see associated Status updates.
- **Assign the Task to a Project Role:** Select the role (e.g., Project Lead, Reviewer Lead). This will automatically assign the task to the user holding that role in the project.
- **Pentester Portal Tasks scheduling mode:** Choose how you want to schedule this task:
 - **Due Date:** Select this to set a standard deadline. Enter a number in **Due Date Days** (e.g., entering means a due date will be calculated 14 days from the completion of the previous task).
 - **Time intervals:** Select this to plan the task using a specific timeframe instead of a single deadline. This unlocks two new settings:
 - **Start Offset (Days):** Number of days offset from the end of the previous task. Default 0 means the task starts when the previous one ends. Use negative values for overlap.
 - **Length of Task (Days):** Planned duration of the task in days.
- **Send Task Due Date Notifications:**

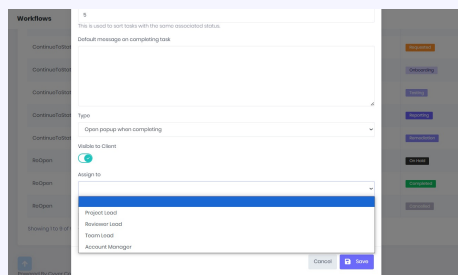

Enable this toggle to notify assignees when their deadline is approaching.

- Don't forget to hit **Save**.

You can edit these steps at any point by navigating to the Workflow Template menu and editing the Workflow.

HOW DO YOU ASSIGN WORKFLOW TASKS TO ROLES?

You assign workflow tasks by editing the Task under the Workflow. From there, you can scroll down to **Assign to** and then select the role you'd like to assign the task to.

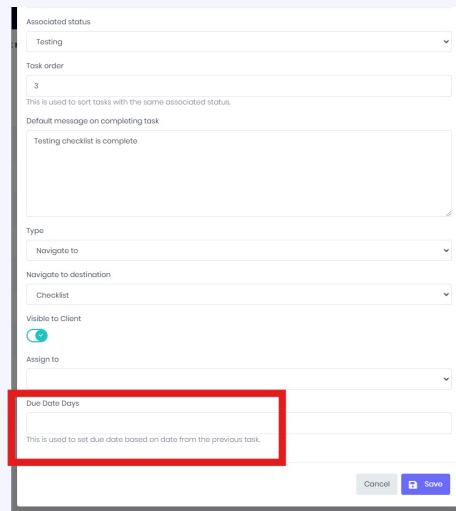

When you set up your Pentest Template, you'll assign individual team members to those roles. Those team members will be assigned these tasks when they are in those roles on a project made with this workflow.

HOW DO YOU CALCULATE WORKFLOW DEADLINES?

Cyver calculates due dates based on number of days from start of the Task. This means that the timer starts when the previous Task is completed and the Task Assignee receives a notification that they have a Task due.

To edit Due Date, go to the Task and edit it. Scroll to the bottom and add a

numerical value. This should be the number of days it takes to complete the task.

The screenshot shows a task configuration form with the following fields and options:

- Associated status:** A dropdown menu with "Testing" selected.
- Task order:** A text input field containing the number "3". Below it is a small note: "This is used to sort tasks with the same associated status."
- Default message on completing task:** A text area containing the text "Testing checklist is complete".
- Type:** A dropdown menu with "Navigate to" selected.
- Navigate to destination:** A dropdown menu with "Checklist" selected.
- Visible to Client:** A toggle switch that is currently turned on (green).
- Assign to:** A dropdown menu.
- Due Date Days:** A text input field, which is highlighted with a red rectangle. Below it is a small note: "This is used to set due date based on date from the previous task."

At the bottom right of the form are two buttons: "Cancel" and "Save".

Keep in mind your deadline should account for maximum number of days to complete the task rather than average number of days to complete the task to ensure your team can finish on time.

You'll see this data from the pentest, in planning, and in individual agendas and availability.

If you'd like to learn more about using Workflow Templates, go to [Workflows](#) for more information.

MANAGING WORKFLOW AT PROJECT LEVEL

Workflow Templates define the structure and logic of your workflow.

If you need to edit tasks directly within a project, adjust assignments, create additional tasks, or reset workflow steps, please refer to: [Workflow Management in Project View](#)
