

If you want to set up multiple Cyver Core email accounts on one email address, you can do so with the Profile Switching settings.

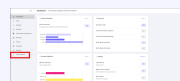

The first account created with an email will always be the Primary account. The Primary account is used for authentication and login. All password policies, including 2FA, will apply to that account.

To set this up:

ENABLE MULTIPLE ACCOUNTS PER EMAIL

Make sure you're logged in with an administrator account.

1. Click **Administration** from the Navigation Menu

2. Click **Portal**

3. Go to the **Security** tab

4. Scroll down to **Other Settings**

5. Click **Allow Users to Switch profiles on Multiple Accounts with the Same Email**

6. Click **Save**

SETTING UP MULTIPLE ACCOUNTS WITH THE SAME EMAIL

Add client or pentest users as you normally would, except now without email restrictions

1. [Add new pentest users](#)
2. [Add new client users](#)

AUTOMATIC ACTIVATION FOR LINKED ACCOUNTS

When you add a new user with an email address that already exists and is confirmed on the

platform, the new account will be **automatically activated**. The user will not receive a new activation email for this linked account and can immediately switch to it.

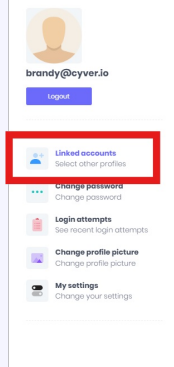

ACCESSING PROFILES AND ACCOUNTS WITH THE SAME EMAIL

You can access any accounts on the same email by logging into your Primary account. From there, you can simply switch between all accounts connected to that email address.

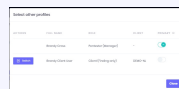

1. Click the **profile photo** in the top right of the account

2. Select **Linked Accounts**

3. Choose from
Linked
Accounts
Connected to
the Email

4. Use the **green toggle** to adjust your primary Cyver Core account
