

If you're uploading findings from multiple tools, it's easy to create duplicates. With Cyver Core, you can easily merge those findings (on a single pentest project) into a single finding ticket.

HOW TO MERGE FINDINGS

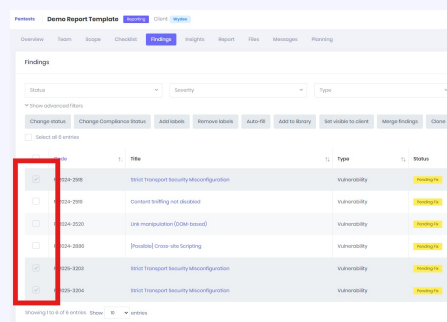

1. Navigate to the Relevant **Pentest Project**

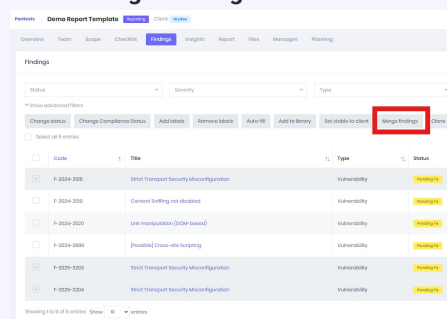

2. Go to the **Findings** Tab

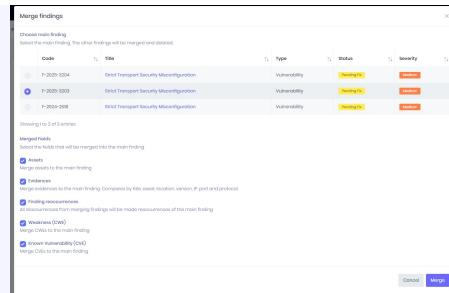

3. Select all **Findings** you'd like to merge. This can be 2 or more.

4. Select **Merge Findings** from the menu

5. Choose your **Primary Finding**, that you'd like to keep

6. Select which data you'd like to merge.
For example, you might want to keep everything if it is different across each finding. Or, you might keep a primary ticket where you've already added titles and imported information from your library and delete everything else but asset location and evidences.
7. Click **Merge**. It should only take a minute.

That's it!
