

Tenable Nessus is one of the world's most popular vulnerability scanners. Cyver Core natively offers imports for Nessus CSV and XML files. This includes importing found vulnerabilities and configuration issues across assets, servers, network devices, virtual machines, and endpoints.

You can manually import Nessus CSV findings or automatically import them via the API.

FINDINGS FIELD MAPPING

Field	Values	Nessus Fields
Code	default: auto-generated	
Title (Required field)		Name
Type	Vulnerability Observation	
Assets	172.24.111.130	Host
Description	The remote host is running a mail (SMTP) server on this port. Since SMTP servers are the targets of spammers, it is recommended you disable it if you do not use it.	Description
Occurrence	New Occurrence Reoccurrence

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
