

Cyber Core natively imports XML files from Invicti.

Invicti is a web application security scanner designed for DAST, with built-in issue validation. Those web application and dynamic application security testing scans can be imported to Cyber Core manually through the finding uploader (in bulk) or automatically with the API.

FINDINGS FIELD MAPPING

Field	Values	Example
Code	default: auto-generated	
Title		<vulnerability> <title>Out-of-date Version (Apache)</title> </vulnerability>
Type	Vulnerability Observation	
Assets		<vulnerability> <url>http://ssh.driikolu.fr/</url> </vulnerability>
Description		<vulnerability> <description><![CDATA[Invicti Standard identified you are using an out-of-date version of Apache.]]></description> </vulnerability>
Occurrence

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
