

Nexpose vulnerability scans can be imported to Cyver Core using XML.

Rapid7's Nexpose delivers vulnerability management complete with asset visibility and discovery, prioritization information, and remediation information. You can import all of that directly to Cyver Core. Here, you can manually import findings or automate imports via API. Simply generate a Nexpose report in XML format and export it for direct import to Cyver Core.

FINDINGS FIELD MAPPING

Field	Values	Example
Code	default: auto-generated	
Title		<vulnerability id="microsoft-exchange-cve-2022-21978" title="Microsoft Exchange: CVE-2022-21978: Microsoft Exchange Server Elevation of Privilege Vulnerability">
Type	Vulnerability Observation

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
