

Cyver Core supports direct imports from ScoutSuite via JSON. Here, you can import individual findings and vulnerabilities, your entire vulnerability library, or scans as they happen. ScoutSuite's open-source security auditing tool, including the cloud monitoring platform NCC Scout, exports vulnerabilities related to configuration, security settings, and more. You can upload these as vulnerabilities or observations.

FINDINGS FIELD MAPPING

Field	Values	Example
Code	default: auto-generated	
Title		{ "cloudformation-stack-with-role": { "description": "Role Passed to Stack" } }
Type	Vulnerability Observation	
Assets		{ "cloudformation-stack-with-role": { "service": "CloudFormation" } }
Description		{ "cloudformation-stack-with-role": { "description": "Role Passed to Stack" } }
Occurrence		
Labels		
Severity	Info Low Medium High Critical default: Info	{ "cloudformation-stack-with-role": { "level": "danger" } }
CVSS20Score

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
