

Cyver Core allows you to directly import Checkmarx scan results and reports into the platform using XML. Here, you can import SAST results on an ongoing basis with the API, import your entire library, or import individual vulnerabilities. Cyver Core supports imports across the full Checkmarx toolset, including code, repository, API, and other security scans. You can also import assets and link those to vulnerabilities.

FINDINGS FIELD MAPPING

Field	Values	Example
Code	default: auto-generated	
Title		<title>Download_of_Code_Without_Integrity_Check</title>
Type	Vulnerability Observation	
Assets		
Description		
Occurrence		
Labels		
Severity	Info Low Medium High Critical default: Info	<severity>High</severity>

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
