

This guide explains how to use the finding counter token in reports using a query string-like syntax.

BASIC STRUCTURE

The token uses URL-style parameters separated by `&` characters. For example:

```
{Finding_Count?setting.filter.type=Vulnerability&setting.filter.status=FalsePositive}
```

This will be replaced by the **number** of Findings, of type Vulnerability and status equal to False Positive.

CONFIGURATION SECTIONS

1. FILTERING

As this token only outputs a number, the only configurable section is the filter:

```
setting.filter.type=Vulnerability,Observation&
setting.filter.status=ReadyRetest,PendingFix&
setting.filter.severity=Critical,High&
setting.filter.labels=Security,PCI-DSS&
```

EXAMPLES

COUNT OF FINDINGS PER LABEL

```
{Finding_Count?setting.filter.labels=<labels>}
```

COUNT OF "CRITICAL" SEVERITY VULNERABILITIES PER LABEL

```
{Finding_Count?
setting.filter.type=Vulnerability&setting.filter.severity=Critical&setting.filter.labels=
<labels>}
```

COUNT OF FINDINGS TYPE OBSERVATION

```
{Finding_Count?setting.filter.type=Observation}
```
