

This guide explains how to use the finding table token in reports using a query string-like syntax.

BASIC STRUCTURE

The token uses URL-style parameters separated by `&` characters. For example:

```
{Finding_Table?columns=title,cvss_score,severity,description,remediation,asset_count&setting.filter.labels=pci}
```

This will be replaced by a **table** of Findings that contain the label *pci*, with the following columns: *title*, *cvss_score*, *severity*, *description*, *remediation* and *asset_count*.

CONFIGURATION SECTIONS

1. REQUIRED PARAMETERS

These are the required parameters and their options. You can find all the available fields [here](#):

```
columns=[field1, field2]&
```

2. GROUPING

Findings can be grouped by asset if desired:

```
group_by=asset&
```

3. FILTERING AND SORTING (OPTIONAL)

Filter findings by various criteria:

```
setting.filter.type=Vulnerability&
setting.filter.status=ReadyRetest,PendingFix&
setting.filter.severity=Critical,High&
setting.filter.labels=Security,PCI-DSS&
setting.sort.direction=Ascending&
```

HTML STRUCTURE AND CSS CLASSES

The Finding Table token generates tabular data organised by groups (typically assets) with configurable columns.

ROOT CONTAINER

```
<div class="finding-table-container">
```

Purpose: Top-level container for all table content

CSS Classes:

- `finding-table-container`: Base wrapper class

GROUP HEADERS

Purpose: Displays the group identifier (e.g., asset name) when `group_by` is configured.

CSS Classes:

- `finding-table-header`

TABLE STRUCTURE

```
<table class="finding-table">
  <thead>
    <tr>
      <th class="table-header [column-name]">Column Display
Name</th>
    </tr>
  </thead>
  <tbody>
    <tr>
      <td class="table-cell [column-name]">Cell Content</td>
    </tr>
  </tbody>
</table>
```

CSS Classes:

- `finding-table` : Base table styling
- `table-header` : Header cell base class
- `table-cell` : Data cell base class
- `[column-name]` : Column-specific class (e.g., `title`, `severity`, `cvss_score`)

EXAMPLES

TABLE WITH VULNERABILITIES (NAME, CVSS, SEVERITY, DESCRIPTION, RECOMMENDATION, AFFECTED ASSETS (COUNT))

```
{Finding_Table?
columns=title,cvss_score,severity,description,remediation,asset_count&
setting.filter.type=Vulnerability}
```

TABLE WITH VULNERABILITIES (SEVERITY, CODE, VULNERABILITY, DESCRIPTION, RECOMMENDATION)

```
{Finding_Table?columns=severity,code,title,description,remediation&
setting.filter.type=Vulnerability}
```

TABLES WITH OBSERVATIONS, GROUPED BY ASSET

```
{Finding_Table?
columns=title&group_by=asset&setting.filter.type=Observation}
```
