

When managing your pentests, you often encounter situations where new vulnerability scans or manual tests uncover findings that are duplicates or re-occurrences of previously identified issues. Instead of cluttering your report with redundant entries, you can auto-merge these new findings with existing ones during the import process. This keeps your findings list clean, concise, and easy to manage, ensuring you have a single, comprehensive record for each unique vulnerability.

You can easily auto-merge new findings with existing ones when importing.

1. Go to "**Pentests**" in the left-hand menu.

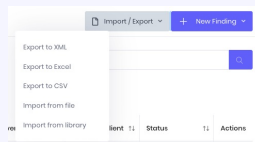

2. Click on the relevant **Pentest**.

3. Move to the **"Findings"** Menu in the Pentest Dashboard.

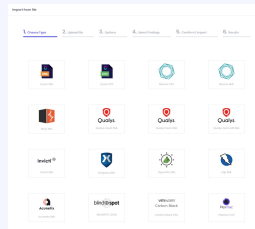

Dashboard | Tools | Assets | Credentials | **Findings** | Integrations | Reports | Help | Messages

4. Click **"Import/Export"** in the top right corner, then select **"Import from file"**.

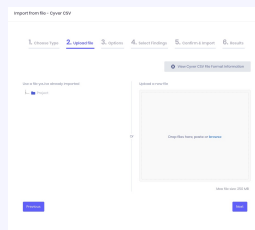

UPLOAD FILE

5. Choose Type

6. Choose the file from your hard drive or drag and drop it to the Dashboard.

7. Wait for the file to upload.

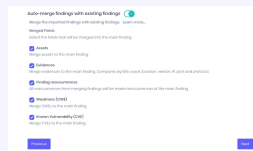

ENABLE AUTO- MERGE

8. Enable the **"Auto-merge findings with existing findings"** toggle.

OPTIONS

9. Update the settings in the **"Options"** section by configuring the **"Merged Fields"**:

- **Assets:** Merge assets to the main finding.
- **Evidences:** Merge evidences to the main finding.
Compares by title, asset, location, version, IP, port and protocol.
- **Finding reoccurrences:** All reoccurrences from merging findings will be made reoccurrences of the main finding.
- **Weakness (CWE):** Merge CWEs to the main finding.
- **Known Vulnerability (CVE):** Merge CVEs to the main finding.

SELECT FINDINGS

10. Select specific findings to upload.

CONFIRM & IMPORT

11. Confirm the import.
This may take a few
minutes.

RESULTS

12. Once complete,
click "**Close**".
