

Cyver Core supports importing findings and reports from **Pentest Tools** in JSON format. You can import results into Cyver, including vulnerabilities across network infrastructure and web applications, as well as associated assets and recommendations identified by the tool.

Export your Pentest Tools results in JSON format to manually import into Cyver Core — or automate the scan imports using the API.

PENTEST TOOLS - NETWORK SCANNER JSON

FINDINGS FIELD MAPPING

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
