

Cyver Core offers a JSON importer for **AppCheck** vulnerability scanning results. To use it, simply export your AppCheck findings as a JSON file and import them directly into Cyver Core from the **Import Findings** tab. The importer supports the standard format provided by AppCheck.

Cyver Core also supports automation of AppCheck imports via API, allowing you to streamline your workflow and ensure findings are continuously updated across your projects.

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.

- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
