

Instead of manually entering each piece of evidence or relying on an Excel file, the **"Add from Text"** feature allows pentesters to quickly parse and import data as structured evidence. This tool is particularly useful for efficiently adding affected IPs to a report as part of the findings.

When the Evidences view in a project is configured to display in **Grid** mode (in the project settings), a new **"Add from text"** button appears next to the existing **"Import"** button.

1. Navigate to the **Pentests** section in the left-hand menu.

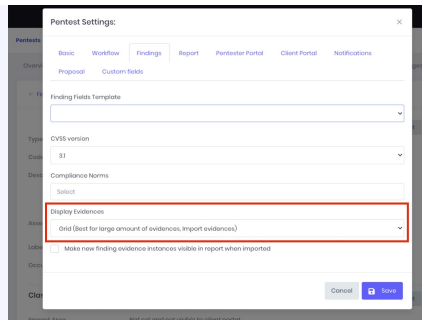

2. Select the relevant **Pentest** from the list.

ACTIVATE THE GRID

3. Go to **Actions > Settings > Findings** and set "Display Evidences" to **"Grid (Best for large amount of evidences, Import evidences)"**.

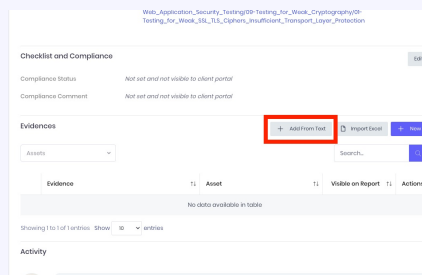

4. Move to the **"Findings"** menu in the Pentest Dashboard.

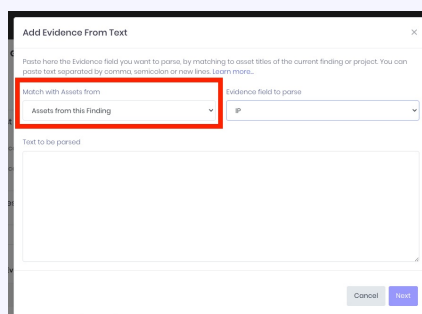

5. Click on the specific finding you wish to add evidence to.

OPENING THE "ADD FROM TEXT" DIALOG

6. Click the **"Add From Text"** button.

7. In the **"Add Evidence From Text"** dialog, choose how you want the evidence to be matched. From the dropdown, select whether to match with assets from the current finding or from the overall project.

When you choose ***All assets from Pentest***, any matched asset that is not already linked to the finding will be

added automatically.

Add Evidence From Text

Paste here the Evidence field you want to parse, by matching to asset titles of the current finding or project. You can paste text separated by comma, semicolon or new lines. [Learn more.](#)

Match with Assets from: **All assets from Pentest**

Evidence field to parse: **IP**

Asset from Pentest: Create evidence and add the matched asset to the finding

Text to be parsed:
