

Cyver Core supports importing findings from **Horizon3** in NodeZero CSV format. You can import results into Cyver, including vulnerabilities across network infrastructure and web applications, as well as associated assets and recommendations identified by the tool.

Export your Horizon3 NodeZero results in CSV format to manually import into Cyver Core - or automate the scan imports using the API.

HORIZON3 NODEZERO CSV

FINDINGS FIELD MAPPING

Field	Value s	Fields
Code		
Title		<Name>SQL Injection Vulnerability</Name>
Type		<Severity>High</Severity> + <Confirmed>True</Confirmed>
Assets		<Hostname>web01.domain.com</Hostname> + <IP>192.168.1.100</IP>
Description		<Description>The application is vulnerable to SQL injection...</Description> + <ContextScoreDescription></ContextScoreDescription>
Occurrence		
Labels		
Severity		<Severity>High</Severity>
CVSS20Score		<ContextScore>8.5</ContextScore>

IMPORTANT NOTES & LIMITATIONS

- The maximum number of findings that can be imported in a single upload is 5,000 findings.
- If your file exceeds this limit, the import may fail depending on the selected import options (e.g., aggregation settings or filtering by severity).
