

You can customize the names of default or custom roles in Cyver to better fit your organization's terminology and avoid confusion. Changing a role's display name updates how it appears throughout the platform, but it does not alter the underlying permissions of that role.

To edit a role's display name:

1. Navigate to **Administration > Roles.**

2. Locate the role you want to rename in the list, then click the **three dots** under the **Actions** column.

Admin Role (Project)	Manage all project settings	View	...
Admin Role (Project)	Manage all project settings	View	...
Admin Role (Project)	Manage all project settings	View	...
Admin Role (Project)	Manage all project settings	View	...
Admin Role (Project)	Manage all project settings	View	...

3. In the modal, update the **Display name** field to your preferred title.

 A screenshot of a modal titled 'Edit role: ProjectRole (Project only)'. It contains several input fields: 'Role name', 'Role (Project)', 'Display name', and 'Role description'. The 'Display name' field is highlighted with a red rectangle. At the bottom, there is a 'Visible' checkbox and 'Cancel' and 'Save' buttons.

4. Click **Save**.
