

Cyver Core allows pentesters and managers to accurately track time spent on specific tasks, either through an automated timer or by manually logging hours. This ensures effort is correctly captured for reporting, billing, and team workload management.

*Precondition: The **Planning** tab must be enabled for the project to use these features.*

## TIME TRACKING DEFINITIONS

Before tracking time, it is important to understand how Cyver Core defines and categorizes time fields across workflow tasks:

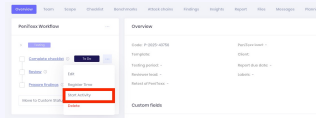

- **Duration:** Actual time spent completing the task.
- **Estimated Time:** Expected time the assignee estimates is needed to complete the task.
- **Effort:** Planned time allocated by managers when assigning and scheduling the work. *(This can be modified at the project level when editing a workflow activity).*

## USE CASE 1: START ACTIVITY FROM A WORKFLOW TASK

As a tester, you can start a live time tracker directly from a workflow activity.

1. Navigate to the **Project Overview**.

2. Locate the specific task you will be working on within the **Pentest Workflow** card.
3. Click the three dots ( **...** ) next to the task and select **Start Activity**.

4. The *Start Activity* modal will appear. The **Status** and **Workflow Task** fields are pre-filled and read-only.

A screenshot of the 'Start Activity' modal form. It contains a 'Status' dropdown menu with 'Testing' selected. Below it is a 'Workflow Task' section with a 'Complete checklist' button. There is an 'Estimated Time' field with a time picker set to 0:00. At the bottom is a 'Note' text area and a 'Start' button with a play icon.

5. Enter your Estimated Time in the HH:MM format.  
*(Important: This is a required field. If left at 0:00, the activity will immediately auto-finish upon starting).*
6. Add an optional **Note**.
7. Click **Start**. The task's status badge on the overview will automatically update to **In Progress**.

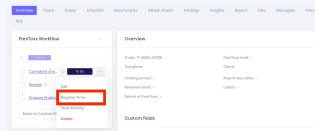

(Note: Starting an activity triggers an automated email notification. To ensure these are sent, please verify your Project and User Notification Settings detailed at the bottom of this article).

## USE CASE 2: REGISTER TIME FROM A WORKFLOW TASK

If you forgot to use the live timer or simply prefer to log your hours after the fact, you can manually

register time for a specific workflow task.

1. Navigate to the **Project Overview**.
2. Locate the task within the Workflow card, click the three dots ( **...** ) next to it, and select **Register Time**.

3. The *Register Time* modal will appear. The **Status** and **Workflow Task** fields are pre-filled based on the task you selected.

A screenshot of the 'Register Time' modal form. It has a title bar with a close button. The form contains several fields: 'Status\*' with a dropdown menu showing 'Testing'; 'Workflow Task\*' with a dropdown menu showing 'Complete Checklist'; 'Date\*' with a date picker showing '10-04-2020'; 'Duration (Hours)\*' with a numeric input field showing '0'; and a 'Note' text area. At the bottom right, there are 'Cancel' and 'Save' buttons.

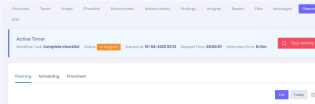

4. Select the **Date** on which the work was performed.
5. Enter your worked **Duration** in the **HH:MM** format.
6. Add an optional **Note** to describe the work done.
7. Click **Save**.

## USE CASE 3: END ACTIVITY MANUALLY

While an activity timer is running, you can manually stop it at any point before your estimated time runs out.

1. Navigate to the **Planning** tab.
2. You will see an **Active Timer** banner at the top of the screen showing the Workflow Task, Status, Started at time,

Elapsed Time, and Estimated Time.

3. Click the **Stop Activity** button to finish.

*(Note: Stopping an activity manually triggers an "End Activity" email notification. See the settings section below to configure this).*

## USE CASE 4: AUTO-STOP ACTIVITY

Cyver Core includes an auto-stop feature to ensure your time tracking remains accurate even if you forget to stop the timer.

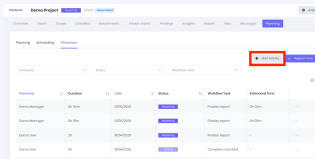

- When the **Estimated Time** you set during the *Start Activity* phase is reached, the system will automatically stop the active timer.
- An "End Activity" email notification is sent out exactly at that time.
- You always retain the option to manually finish the activity before this limit is reached (see Use Case 3).

## USE CASE 5: START ACTIVITY FROM THE TIMESHEETS

You can also launch the live timer directly from the Planning tab instead of the Project Overview.

1. Open your project and navigate to the **Planning** tab.

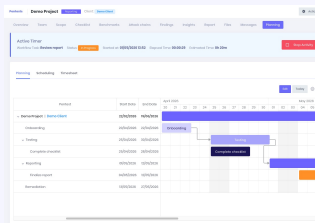

2. Select the **Timesheet** sub-tab.
3. Click the **Start Activity** button.

4. In the modal, manually select the related **Status** and **Workflow Task** from the dropdown menus.

A screenshot of the 'Start Activity' modal form. The form has fields for 'Status' (a dropdown menu), 'Workflow Task' (a dropdown menu), 'Estimated Time' (a text input field with 'HH' and 'MM' labels), and a 'Note' (a text area). There are 'Cancel' and 'Start' buttons at the bottom right.

5. Enter your **Estimated Time** (HH:MM) and an optional **Note**.
6. Click **Start**. The Active Timer banner will immediately appear at the top of the screen.

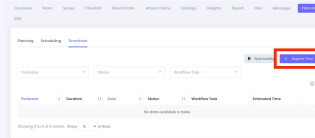

## USE CASE 6: REGISTER TIME FROM THE TIMESHEETS

Sometimes you need to log hours for activities that are not directly tied to a specific, predefined workflow task.

1. Open your project and navigate to the **Planning** tab.
2. Select the **Timesheet** sub-tab.

3. Click the **+ Register Time** button on the right side of the screen.

4. In the *New timesheet record* modal, the Workflow Task is not required. Simply fill in the **Pentester**, the related **Status**, **Date**, **Duration** (HH:MM), and add an optional **Note**.

A screenshot of a 'New timesheet record' modal window. The modal has a title bar with a close button. It contains several input fields: 'Pentester\*' (a dropdown menu), 'Status\*' (a dropdown menu), 'Workflow Task' (a dropdown menu), 'Date\*' (a date picker showing '10-04-2020'), 'Duration (HH:MM)\*' (a time input field with '0' in the hours and '0' in the minutes), and 'Note' (a text area). At the bottom right, there are two buttons: 'Cancel' and 'Save'.

5. Click **Save**. The newly logged time will appear as a row in the Timesheet table.

## CONFIGURING WORKFLOW TIMESHEET NOTIFICATIONS & EMAIL TEMPLATES

Whenever a workflow timesheet activity is started, manually stopped, or auto-stopped, Cyver Core can send automated alerts. For these alerts to function, the correct notification settings must be enabled at both the project and user levels.

### 1. PROJECT NOTIFICATION SETTINGS

You must explicitly allow the project to send timesheet notifications to pentesters or clients.

1. From your specific Pentest, click the **Actions** dropdown at the top right and select **Settings**.
2. Navigate to the **Notifications** tab.

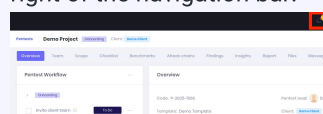

3. Ensure the main toggle for **Pentester Users Notifications** (or Client Users Notifications) is turned ON.
4. Scroll down to the *Pentest notifications* section and check the boxes for **Timesheet activity started** and **Timesheet activity stopped**.

5. Click **Save**.

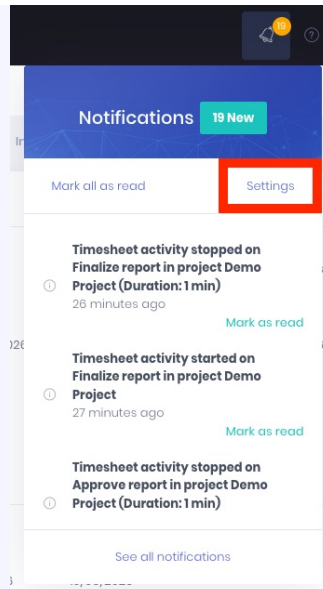

## 2. USER-LEVEL EMAIL SETTINGS

Individual users must also opt-in to receive these alerts in their personal settings.

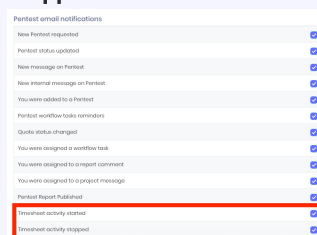

1. Click the **Bell Icon** (Notifications) at the top right of the navigation bar.

2. Click **Settings** to open your *Email notification settings* modal.

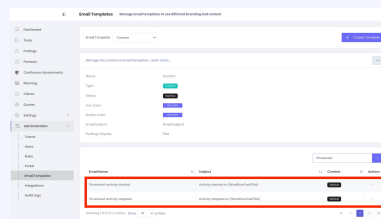

3. Scroll down to *Pentest email notifications*.
4. Check the boxes for **Timesheet activity started** and **Timesheet activity stopped**.

### 3. CUSTOMIZING EMAIL TEMPLATES (ADMIN)

Administrators can customize the wording, branding, and data included in these automated emails. Cyver Core uses two specific system templates for these alerts:

- **Timesheet activity started:**  
Notifies relevant parties that an activity has begun. It automatically pulls in dynamic project data using tokens like

{WorkflowTaskTitle} ,  
{PentestName} , and  
{SentByFullName} .

Email Template: Timesheet activity started

Name\* Timesheet activity started [View Email Template](#)

Subject\* Activity started on {WorkflowTaskTitle}

## {PentestName} Activity started

\*\*Workflow Task\*\*: {WorkflowTaskTitle}

\*\*Project name\*\*: {PentestName}

\*\*Sent by\*\*: {SentByFullName} ({TeamName})

{Link\_View}

Cancel Save

- **Timesheet activity stopped:**  
Notifies parties that the activity has ended. It includes the same project details, plus the total logged time using the {Duration} token.

Email Template: Timesheet activity stopped

Name\* Timesheet activity stopped [View Email Template](#)

Subject\* Activity stopped on {WorkflowTaskTitle}

## {PentestName} Activity stopped

\*\*Workflow Task\*\*: {WorkflowTaskTitle}

\*\*Duration\*\*: {Duration}

\*\*Project name\*\*: {PentestName}

\*\*Stopped by\*\*: {SentByFullName} ({TeamName})

{Link\_View}
