

In Cyver Core, **Custom Displays** allow you to save your most frequently used filter combinations as dedicated, quick-access tabs. This powerful organization tool works universally across the **Tasks**, **Pentests**, **Findings**, and **Clients** modules.

Creating a custom display is a two-part process: first, you create the display "tab," and then you save your specific filters to it.

1. CREATE A NEW DISPLAY TAB

Before applying filters, you must create a named tab to hold your configuration.

1. Click the three dots (**⋮**) next to the default display tabs at the top of the grid.

2. Select **Manage displays**.

3. In the modal, click **+ New display**.

4. Enter a clear **Name** for your view (e.g., "Critical SQL Findings").

5. Choose the **Visibility** and **Pinning Options** (Dashboard & Left Menu) and click **Save**. *Note: At this stage, the display is just a placeholder and does not yet contain specific filters.*

2. CONFIGURE AND SAVE YOUR FILTERS

Once your new display tab appears at the top of the grid, you need to "lock in" your desired filters:

1. Click on the newly created tab to select it.

2. Set your parameters.

- **Example (Findings):** You might set *Severity: Critical* and *Status: Pending Fix*.
- **Example (Search):** Type "SQL" into the search bar. **The Search bar is saved as a filter parameter!**

3. Once the grid shows exactly what you want, click the three dots (**...**) again and select **Save selected display**.

- Click **Yes**. Your filters are now permanently linked to this tab.

3. MANAGING AND DELETING DISPLAYS

You can edit settings, toggle visibility, or delete displays at any time.

- Click the three dots () and select **Manage displays**.

- To Show/Hide:** Use the toggle switches next to each display name.

- To Edit or Delete:** Click the dropdown arrow () next to a specific display.
 - You can rename it or update its pinning preferences.
 - To remove it permanently, click the red **Delete** button.

Open Closed All Order by Severity Critical SQL Findings

Name* Critical SQL Findings

Cancel Save

4. WHERE TO FIND YOUR PINNED DISPLAYS

Once saved, your pinned displays will immediately appear in their designated locations, keeping your most critical data just one click away.

Pinned to Left Menu: The display will appear as a nested sub-item directly under its parent module in the left-hand navigation bar.

Pinned to Dashboard: The display will appear as a dedicated, real-time widget on your main Dashboard alongside your existing metrics.
