

Cyver Core allows you to collapse the main left-hand navigation menu to maximize your workspace. This is especially useful when viewing large data grids, complex attack chains, or working inside the report editor.

COLLAPSING AND EXPANDING THE MENU

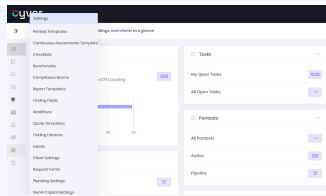

To toggle the menu's state, simply click the double-arrow collapse icon (<< or >>) located at the top of the left menu bar.

NAVIGATING IN COLLAPSED MODE

When the menu is collapsed, it displays module icons instead of full text names to save horizontal screen space.

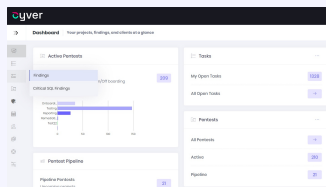

You do not need to expand the menu to navigate through the platform. Simply **hover** your mouse pointer over any module icon. A flyout menu will seamlessly appear, displaying all the sub-items and options for that section.

ACCESSING PINNED CUSTOM DISPLAYS

If you have created and pinned specific filters to your left menu, they remain easily accessible even when the menu is collapsed.

Hovering over a module's icon (Findings, Pentests, Tasks or Clients) will reveal your pinned custom displays right below the main module link in the flyout menu. You can click them directly to jump to your filtered lists.

Note: To learn how to create these tailored views and pin them to your sidebar, check out our full guide on [Custom Displays](#).
