

Compliance Norms allow you to quickly add Control Groups and Task lists to pentests, so you can easily assign tasks and share how pentests comply with industry standards for audits and specific types of pentests.

You can use pre-defined Compliance Norms set up by Cyver, build your own, or edit Cyver's Compliance Norms to have the best of both worlds.

To start, go to Compliance Norms from Settings on the menu:

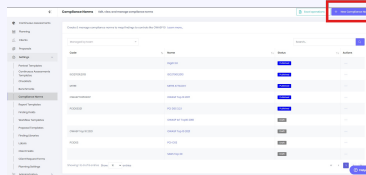

ADD COMPLIANCE NORMS

Click the **+ New Compliance Norm** button in the mid-top right to create a new Compliance Norm. Manually add Control Groups and Tasks to proceed. New Compliance Norms default as **Draft** options, meaning they are not visible to Clients and cannot be used in Projects. This allows you to take time to build an Compliance Norm before publishing it.

UPLOAD NEW COMPLIANCE NORMS

1. Click the **+ New Compliance Norm** button in the top right of the platform.

2. Add a name, description, and code for your new Compliance Norm

3. Click **Save**

4. Select the newly created Compliance Norm from the list

5. Click **Control Groups**

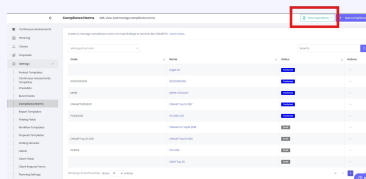

6. Click **+ New Control Group**

IMPORT FROM EXCEL

Cyver Core delivers a library of [pre-defined Compliance Norms](#) complete with Control Groups and Checklists. You can download these from our [GitHub Repository](#).

1. **Download** the XLSX file you'd like to import OR make your own

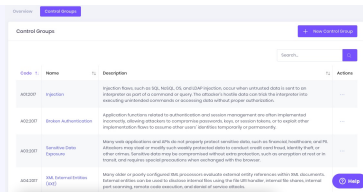

2. From the Compliance Norms Dashboard, click **Excel Operations and Import File**

3. Select the file. Your Compliance Norm will import as a draft Compliance Norm complete with Control Groups.

4. Edit the Compliance Norm to add your own titles or to customize the content

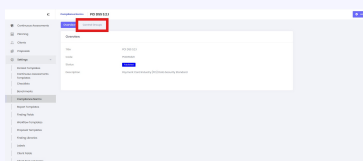

CONTROL GROUPS

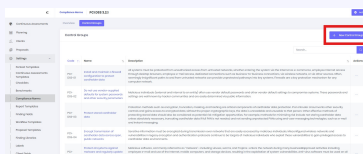

If you import one of Cyver's pre-defined Compliance Norms, it will upload complete with Control Groups attached. You can also manually add Control Groups to a Pentest Norm.

1. Click the Compliance Norm you'd like to edit

2. Click the **Control Groups** tab

3. Select **+ New Control Group**

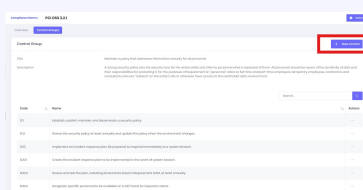

Control Groups include:

- Control Objective Code
- Name
- Description
- URL to source/reference

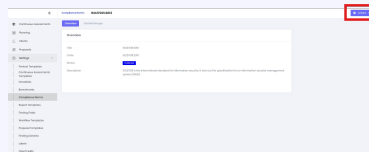

Click ... on the far right of any existing Control Group to edit or delete this data

4. Select the Control Group and click **+ New Control** to add controls. You can edit or delete these controls at any time by clicking ... from the Controls dashboard

EDIT OR UPDATE EXISTING COMPLIANCE NORMS

1. Click on a Compliance Norm from the existing list
2. Click the blue **Actions** button in the top right corner or select ... to Edit or Delete the Norm

EDIT

Click “Edit” to move a Compliance Norm from Draft to Published or to unpublish back to draft. You can also update external links to audit norm sources or reference information.

- Click **Group Objectives** to manually add new Group Objectives
- Click **Tasks** to manually add new Tasks

DELETE

Click **Delete** to remove the Compliance Norm from your list. You will have one confirmation popup. **Important:** At this time, there is no recycle bin or archive. Once deleted, Compliance Norms are gone for good.

HOW COMPLIANCE NORM UPDATES AFFECT EXISTING PROJECTS

Any updates made later to the original Compliance Norm template (such as changes to

Control names or codes) **will not automatically apply** to projects where the Compliance Norm has already been added.

If you need updated Control names or codes to appear in an existing project, you must reapply the Compliance Norm:

1. Go to **Project Settings > Findings > Compliance Norms**
2. Remove the existing Compliance Norm
3. Re-add the updated Compliance Norm to the project

Once re-added, the project will use the latest version of the Compliance Norm.
