

Cyver Core offers a full client portal, which will display your branding as uploaded in the first step of this tutorial. Clients can interact with your organization, communicate with pentesters, and request pentests.

## TO ADD A CLIENT ACCOUNT:

1. Click "Clients" in the left-hand menu

2. Click "+ New Client"

3. Add Client Name and Client Number. Client Number can be from your existing invoicing or other client management system

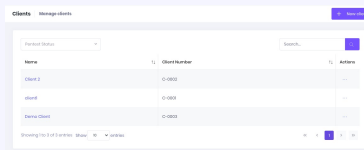

A screenshot of the "New client" form. It has a title bar "New client" with a close button. The form contains three input fields: "Name\*" (with a cursor), "Client Number\*" (with the value "C-0004"), and "Teams" (empty). At the bottom right, there are "Cancel" and "Save" buttons.

4. Assign a Team (optional) to that Client

A screenshot of the "Teams" dropdown menu. It shows a list of teams: "Test 123" and "Test 1". At the bottom right, there are "Cancel" and "Save" buttons.

## TO ADD USERS:

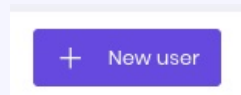

1. Click the Client Name you've just added from the list

2. Click "Users" from the sub-menu

3. Click "New User"

4. Fill out user information. The Client will receive an email with an invite to the portal when you hit "Save". The new user will have a "Client" role in the system.

A screenshot of the 'Create new user' form. It has a 'User information' tab. The form includes fields for 'Name' (with sub-fields 'Demo' and 'Surname'), 'Email address' (with value 'Demo@demoTV.com'), and 'Phone number'. There are also checkboxes for 'Set random password', 'Should change password on next login', 'Send activation email', 'Active', and 'Default enabled'. At the bottom, there are 'Cancel' and 'Save' buttons.

**Information** – The "Information" tab can be edited by you or anyone with permissions from the Client side. Here, you can add and edit the company name, contacts, and address. Contacts are automatically imported into reports and may receive notifications to email addresses. Pentesters and Clients can update this tab.

**Pentests** – The "Pentests" tab shows all (past, present, scheduled) pentests for the client. Pentesters or the Client can request a Pentest.

**Assets** – Assets include websites, applications, networks, etc., which are automatically imported into Pentest requests to set project scope.

Congratulations, you're ready to start

your first pentest in our system!
