

Reports can be published from the Pentest once the Pentest is in the [Reporting stage](#). However, you can generate Reports at any time. This allows you to generate a report, tweak and edit content, and otherwise ensure the report is ready before publication. When you're ready to publish, use the following steps to do so:

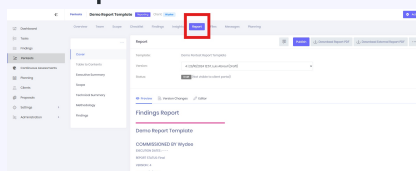

1. Go to **Pentests** from the Navigation Menu

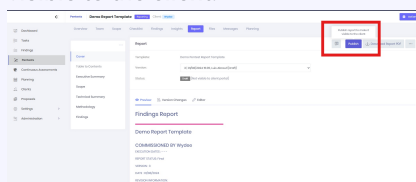

2. Click on the relevant Pentest

3. Click **Report** in the Pentest Tab

4. If this is the first time you've generated a report for this Pentest, click **Generate Draft Report** Cyver will compile all data from findings, the Pentest, the client, and assets into your chosen Report Template.
5. Click "**Publish**" to make the report visible to the client.

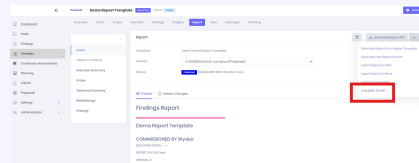

DELETE A PUBLISHED REPORT

Once published, reports are always visible to the client. You may **unpublish** the report

to remove it.

1. Click ... from the Report Tab and select **Unpublish**

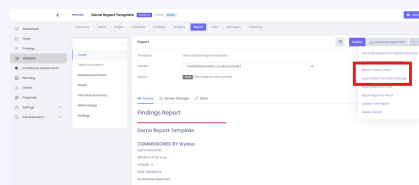

2. Confirm

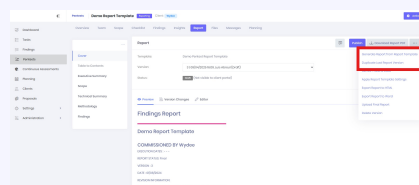

However, Cyver Core also supports versioning. This means you can create and manage multiple versions of the same report. If you complete another assessment, add new assets, find mistakes, or simply want to map vulnerability findings to a different compliance framework, you can easily generate and publish a new version of the report.

PUBLISH MULTIPLE VERSIONS OF A REPORT

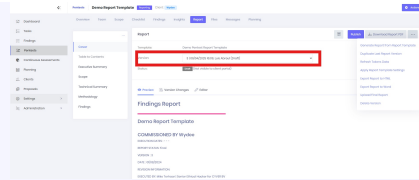

1. Navigate to the report you'd like to republish and click ...
2. Update the Report by **Applying Report Template Settings** or **Refreshing Tokens Data**

3. **Generate a Report from the Report Template** or **Duplicate Last Report Version**

4. Select the Version you'd like to edit and use. Your new report version generates as a draft.

5. You can publish as many versions of your report to the client as you'd like. Click publish just like you would with a single version of your report.
