

You can join Cyver Core through an email invite from your Pentester or through their website. In each case, the setup process will be the same. You or your Pentester will set up a Company account on their Cyver Core server, and then will set up an Admin User for that company. You'll receive an email, where you can complete the setup.

Welcome to Cyver DEMO

[Forgot password? | Email activation](#)

 Google

1. Click "Verify" in the email invite
2. Sign in
3. You'll likely have to change your password at this stage

That's it, you now have complete access to Cyver Core portal. [Click here to learn how to update account information.](#)
