

Assets include websites, apps, APIs, and other elements which you might want your Pentester to assess. You should add these Assets before starting your first Pentest.

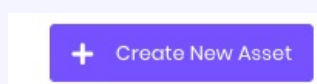

1. Click "Settings" in the left-hand menu

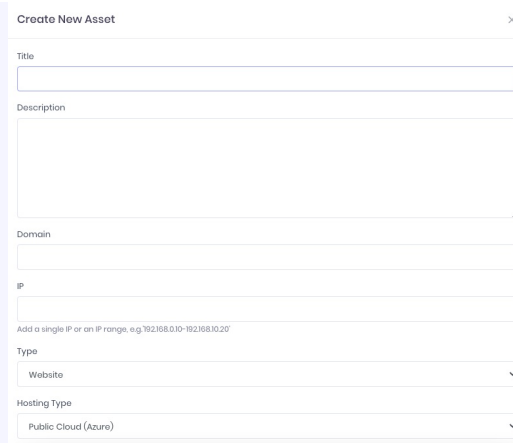

2. Click "Assets"

3. Select the "+ New Asset" button from the upper right

4. Add an Asset Title. Asset Titles should be descriptive and unique

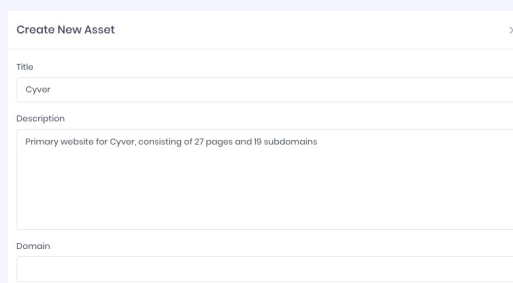

The screenshot shows the 'Create New Asset' form with the following fields and options:

- Title:** An empty text input field.
- Description:** A large empty text area.
- Domain:** An empty text input field.
- IP:** An empty text input field.
- IP Help:** A small text label below the IP field that reads: "Add a single IP or an IP range, e.g. 192.168.0.10-192.168.10.20".
- Type:** A dropdown menu with "Website" selected.
- Hosting Type:** A dropdown menu with "Public Cloud (Azure)" selected.

5. Add a description.

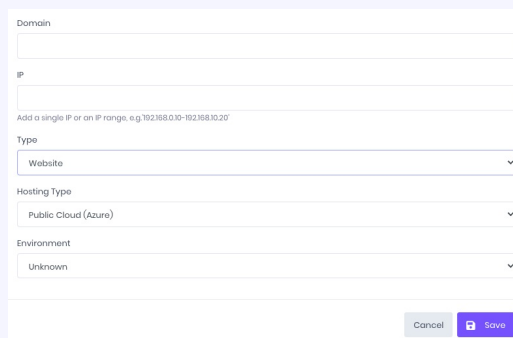

- E.g., *“Primary website for Cyver Core, consisting of 27 pages and 19 subdomains”*

The screenshot shows the 'Create New Asset' form with the following fields and options:

- Title:** An empty text input field.
- Description:** A text area containing the text: "Primary website for Cyver, consisting of 27 pages and 19 subdomains".
- Domain:** An empty text input field.

6. Add Information and Asset Type

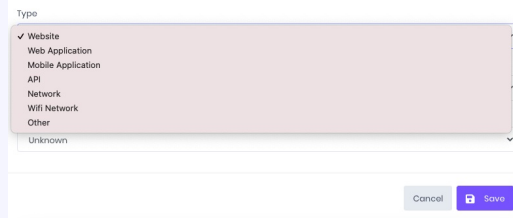

The screenshot shows the 'Create New Asset' form with the following fields and options:

- Domain:** An empty text input field.
- IP:** An empty text input field.
- IP Help:** A small text label below the IP field that reads: "Add a single IP or an IP range, e.g. 192.168.0.10-192.168.10.20".
- Type:** A dropdown menu with "Website" selected.
- Hosting Type:** A dropdown menu with "Public Cloud (Azure)" selected.
- Environment:** A dropdown menu with "Unknown" selected.
- Buttons:** "Cancel" and "Save" buttons are located at the bottom right of the form.

Select Asset Type. In this case “Website”. Cyver Core offers 6 categorization options:

- Website
- Web Application
- Mobile Application
- API
- Network
- Other

Type

- ✓ Website
- Web Application
- Mobile Application
- API
- Network
- Wifi Network
- Other
- Unknown
