

Report tokens link to Pentest data so that you can auto-populate reports.

To add a Token, type the Token name in the report template draft.

| TOKEN                            | FUNCTION                                          |
|----------------------------------|---------------------------------------------------|
| {Client_Name}                    | Client Name                                       |
| {Client_Logo}                    | Client logo that was uploaded                     |
| {Client_MainContact_Name}        | Name of main contact                              |
| {Client_MainContact_Email}       | Email of main contact                             |
| {Client_MainContact_Phone}       | Phone of main contact                             |
| {Client_ComplianceContact_Name}  | Name of Compliance contact                        |
| {Client_ComplianceContact_Email} | Email of Compliance contact                       |
| {Client_ComplianceContact_Phone} | Phone of Compliance contact                       |
| {Client_TechnicalContact_Name}   | Name of Technical contact                         |
| {Client_TechnicalContact_Email}  | Email of Technical contact                        |
| {Client_TechnicalContact_Phone}  | Phone of Technical contact                        |
| {Client_FinanceContact_Name}     | Name of Finance contact                           |
| {Client_FinanceContact_Email}    | Email of Finance contact                          |
| {Client_FinanceContact_Phone}    | Phone of Finance contact                          |
| {Project_Code}                   | Project Code                                      |
| {Project_Name}                   | Pentest Name                                      |
| {Project_Status}                 | Pentest status at the moment of report generation |
| {Project_TemplateName}           | Project template name                             |
| {Project_TestingStartDate}       | Testing start date                                |
| {Project_TestingEndDate}         | Testing end date                                  |
| {Project_Checklist}              | Checklist name                                    |
| {Report_CreatedOn}               | Report creation date                              |
| {Report_Version}                 | Report version                                    |
| {Team_Lead}                      | Name of the pentester lead                        |

|                                                        |                                                                                 |
|--------------------------------------------------------|---------------------------------------------------------------------------------|
| {Team_Reviewer}                                        | Name of the reviewer lead                                                       |
| {Team_Pentesters}                                      | Names of pentesters                                                             |
| {Team_Clients}                                         | Names of client users                                                           |
| {Findings_Vuln_Critical_SummaryList}                   | Table with “Critical” severity vulnerabilities                                  |
| {Findings_Vuln_High_SummaryList}                       | Table with “High” severity vulnerabilities                                      |
| {Findings_Vuln_Significant_SummaryList}                | Table with “High” and “Critical” severity vulnerabilities                       |
| {Findings_Vuln_BackgorundInfo_Summary_GroupBySeverity} | Summary of Vulnerabilities and background information text, grouped by Severity |
| {Findings_Vuln_PieChart_Severity}                      | A pie chart with vulnerabilities by severity                                    |
| {Findings_Vuln_L-<label>_PieChart_Severity}            | A pie chart with vulnerabilities by severity, filtered by label                 |
| {Findings_Vuln_PieChart_Status}                        | A pie chart with vulnerabilities by status                                      |
| {Findings_Vuln_L-<label>_PieChart_Status}              | A pie chart with vulnerabilities by status , filtered by label                  |
| {Findings_Vuln_Count}                                  | Count of findings type vulnerability                                            |
| {Findings_Vuln_Critical_Count}                         | Count of “Critical” severity vulnerabilities                                    |
| {Findings_Vuln_High_Count}                             | Count of “High” severity vulnerabilities                                        |
| {Findings_Vuln_Med_Count}                              | Count of “Medium” severity vulnerabilities                                      |
| {Findings_Vuln_Low_Count}                              | Count of “Low” severity vulnerabilities                                         |
| {Findings_Vuln_Info_Count}                             | Count of “Info” severity vulnerabilities                                        |
| {Findings_L-<label>_Count}                             | Count of findings per Label                                                     |
| {Findings_L-<label>_Critical_Count}                    | Count of “Critical” severity vulnerabilities per Label                          |
| {Findings_L-<label>_High_Count}                        | Count of “High” severity vulnerabilities per Label                              |
| {Findings_L-<label>_Med_Count}                         | Count of “Medium” severity vulnerabilities per Label                            |
| {Findings_L-<label>_Low_Count}                         | Count of “Low” severity vulnerabilities per Label                               |
| {Findings_L-<label>_Info_Count}                        | Count of “Info” severity vulnerabilities per Label                              |
| {Findings_Vuln_PendingFix_Count}                       | Count of “Pending fix” status vulnerabilities                                   |
|                                                        | Count of “Retest requested” status                                              |

|                                              |                                                                                                         |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------|
| {Findings_Vuln_RetestRequested_Count}        | vulnerabilities                                                                                         |
| {Findings_Vuln_Fixed_Count}                  | Count of "Fixed" status vulnerabilities                                                                 |
| {Findings_Vuln_Accepted_Count}               | Count of "Accepted" status vulnerabilities                                                              |
| {Findings_Vuln_Table}                        | Table with all vulnerabilities (finding name, severity, CVSS - if used)                                 |
| {Findings_Vuln_Severity_Table}               | Table with all vulnerabilities (finding name + severity)                                                |
| {Findings_Vuln_Status_Table}                 | Table with vulnerabilities and status (finding name + status)                                           |
| {Findings_Vuln_Recomendations_Table}         | Table with vulnerabilities (Name, CVSS, Severity, Description, Recommendation, Affected Assets (count)) |
| {Findings_Vuln_Recomendations_Table-v2}      | Table with vulnerabilities (Severity, Code, Vulnerability , Description, Recommendation)                |
| {Findings_Vuln_GroupByAsset_Table}           | Tables with vulnerabilities (finding name + severity), grouped by Asset                                 |
| {Findings_Vuln_DetailsList}                  | List of all vulnerabilities with details (non-empty fields)                                             |
| {Findings_Vuln_DetailsList-v2}               | List of all vulnerabilities with details (non-empty fields) in table format                             |
| {Findings_Vuln_DetailsList-v3}               | List of all vulnerabilities with details (non-empty fields) with Table header for key fields.           |
| {Findings_Obs_Count}                         | Count of findings type observation                                                                      |
| {Findings_Obs_Table}                         | Table with all observations                                                                             |
| {Findings_Obs_GroupByAsset_Table}            | Tables with observations, grouped by Asset                                                              |
| {Findings_Obs_DetailsList}                   | List of all observations with details (non-empty fields)                                                |
| {Findings_Obs_DetailsList-v2}                | List of all observations with details (non-empty fields) in table format                                |
| {Findings_L-<label>_Table}                   | table with all findings containing label <label>                                                        |
| {Findings_L-<label>_GroupByAsset_Table}      | table with all findings containing label <label>, grouped by asset                                      |
| {Findings_Vuln_L-<label>_GroupByAsset_Table} | Detailed list of vulnerabilities containing label <label>                                               |
| {Findings_Obs_L-<label>_GroupByAsset_Table}  | Detailed list of observations containing label <label>                                                  |
|                                              | Detailed list of all findings containing                                                                |

|                                         |                                                                        |
|-----------------------------------------|------------------------------------------------------------------------|
| {Findings_L-<label>_DetailsList}        | label <label>                                                          |
| {Findings_L-<label>_DetailsList-v2}     | Detailed list of all findings containing label <label> in table format |
| {ComplianceNorm_Table}                  | Compliance norm table with all controls and related findings           |
| {ComplianceNorm_Table_OnlyWithFindings} | Compliance norm table with controls with findings                      |
| {ComplianceNorm_Summary}                | Compliance norm summary                                                |
| {ComplianceNorm_Name}                   | Compliance norm name                                                   |
| {Scope_AssignmentObjectives}            | Client assignment objectives                                           |
| {Scope_Methodology}                     | Project methodology                                                    |
| {Scope_Assets_Count}                    | Count of project assets                                                |
| {Scope_Assets_List}                     | List of project assets                                                 |
| {Findings_Nonconf_Table}                | Table with all non-conformities                                        |
| {Findings_Nonconf_DetailsList}          | List of all non-conformities with details (non-empty fields)           |
| {Severity_Critical}                     | Severity Label Critical                                                |
| {Severity_High}                         | Severity Label High                                                    |
| {Severity_Medium}                       | Severity Label Medium                                                  |
| {Severity_Low}                          | Severity Label Low                                                     |
| {Severity_Info}                         | Severity Label Info                                                    |

Each of these tokens allows you to automate report generation. Use them in text to auto-populate data after the report.
