

Cyver strives to remain the highest level of uptime possible for all Subscribers. Our goal is to maintain a system availability of 99.6% or higher on average, during Service Hours.

<https://status.cyver.io/>

Availability means that you can log into your Cyver Core account and use the platform as intended. This is measured from the Cyver Core server on a regional location basis. Each Cyver regional location is measured every 3 minutes from at least 6 global locations.

For Subscribers with the Premium Service Level Agreement, this goal becomes a commitment. Check our Premium SLA [here](#).
