

EXPORT FROM NESSUS

After doing a scan you must create a CSV report file. Below are the steps on how to do this:

1. Select the correct scan from an overview like this (below)

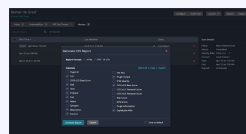

2. Nessus presents the finished scans. Collect the correct scan.

3. Select "**Report**" right top of the screen and a similar screen will appear.

4. Select the CSV check from the "**Generate Report**" window and below will appear.

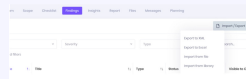

5. Next select "**Generate Report**" and your file will be created and uploaded to your

download folder.

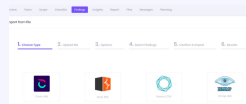

This file needs to be imported into CYVER CORE.

Import to Cyver

1. Go to Findings/Import from file

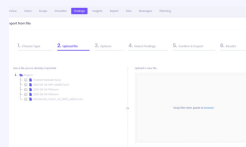

2. Next Select Nessus CSV

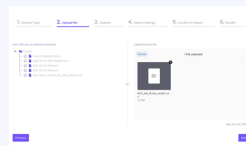

Note that this is a 6 steps process, you can see your progress in the bar.

3. Drag or select the CSV or browse to the correct Nessus file.

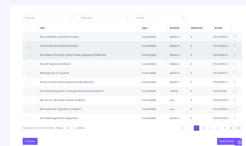

4. Select NEXT

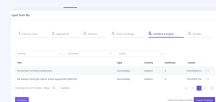

5. Make sure you select the correct matching and select NEXT again.

6. Findings are processed and you can select the findings you want to show inside the porta. Select **"Select Findings"**.

7. findings are selected and ready for IMPORT. Select **"Import Findings"**.

8. Result step 6. Select **"Go to Findings"** and done.
